# Wando Traditional laver cultivation using wooden struts

**Name.** Wando Traditional laver cultivation using wooden struts

**Date of Designation.** December 4, 2017

**Location.** Gogum-myeon, Cheongyong-ri/ Gagyo-ri/ Bongmyeong-ri,  
Wando-gun, Jeollanam-do, Republic of Korea(358ha)

**Features.**

**Wando Traditional laver cultivation using wooden struts**

Wando Traditional laver cultivation using wooden struts is an eco-friendly and traditional way of laver cultivation. This cultivation technique produces laver by exposing it to sunlight repeatedly for a certain amount of time. Also, it uses the characteristic of the fishing ground in this region such as shallow water and a large tidal range.
